

NEXTUP Credential Tracking Program

No Charge Program · Avoid Card Number Duplication · Same Quick Lead Times

Hirsch’s NextUP credential tracking program provides protection against card duplication.

The program was created for dealers, end-users, and manufacturers to ensure uniqueness and avoid duplicate physical access control system (PACS) numbers on any given deployment. With quality credential construction, multiple card formats, NextUP tracking, superior customer service, and outstanding pricing, make Hirsch your one stop for proximity card purchasing.

What Types

All Hirsch 125kHz proximity credentials can be tracked by NextUP. Any combination of credentials can be used on a single customer account.

How It Works

Hirsch provides customers with a NextUP account number upon application completion. At the time of each order, the customer supplies their NextUP account number and credential type on their PO. Hirsch then supplies the card number.

Who Qualifies

Anyone who purchases over 1,000 credentials annually from Hirsch qualifies. Credentials can be ordered across multiple POs but must have the same format and facility code.

Card Type	Hirsch Part Number	HID® Part Number	Allegion/Schlage Part Number	Programming	Card Numbering
Clamshell	4000	1326	7410	Programmed (P) Non-Programmed (N) Initialized Programmer (I)	Sequential Matching (M) No Card Marking (N) Sequential/Non Match (S) Random R

ISO Composite Mag Stripe	4032	1346	7610		
Key Fob	4082	1346	7610		
Wristband	4096, 4098	—	—		

- 26 bit format (H10301) is the most commonly used industry standard. The range of card numbers available in 26 bit is limited and the format is "unmanaged" (i.e., with potential card numbers duplicated in some deployments). This short format provides convenience and universal support in access control solutions.
- 37 bit format (H10302) is a common "managed" format. It ensures numbers are unique and will not be duplicated. Before ordering 37 bit cards, confirm your system works with or without facility codes.
- 35 bit or 48 bit "Corporate 1000" cards are designed to provide large end-users with their own format, ensuring card numbers are always unique and cannot be duplicated.
- Please contact your Hirsch Sales Rep to verify your required format. Hirsch continuously expands its list of supported formats and can work with any request.
