

Competitive Advantages

1

Identiv is based in the United States, headquartered in Fremont, California.

2

The Hirsch Velocity security management system is highly scalable to address customers with thousands of controlled areas.

3

Velocity provides flexibility for end users, through Hirsch hardware, customized solutions, integrations, and site specific criteria.

4

Hirsch hardware is known to be extremely strong, lasting for years on site. Hardware, both old and new, is built to be compatible to avoid unnecessary replacement costs.

5

Hirsch Velocity comes with a broad feature set compared to others in the industry. Velocity does not require additional licenses to receive many standard features such as a web console, badging, enrollment, graphics, and additional clients.

6

Velocity is available through a thick client, web client, or cloud solution, providing end users with flexibility to use mobile or fixed devices for system control. Systems can be operated from anywhere in the world or restricted to a single location.

7

Velocity continues the Hirsch legacy of robust, award-winning architecture and user-friendly design. Existing users will find the transition to new versions seamless, thanks to its modular user interface. New users can quickly get up to speed with the help of extensive tutorials and user guides.

8

Hirsch systems are used in government buildings, medical complexes, education campuses, airports, and many other types of environments, ensuring ease of use, while providing enhanced protection and security.

9

Velocity can integrate seamlessly with the Velocity Vision video management system (VMS), and provide end users with a whole site management solution, with access control and video management all in one place.

10

On top of Velocity and hardware, Identiv provides readers, third-party hardware, and video integrations, wireless locks, intrusion detection integrations, HR/AD integrations, and more.

VELOCITY
SECURITY MANAGEMENT SYSTEM

Hirsch Velocity

Hirsch Velocity is an all-in-one security management system designed to manage access control and security operations across a wide range of facilities. From securing individual high-risk rooms, to managing multi-building, multi-location campuses, Velocity has it covered. Velocity manages physical access control, photo ID, visitor management, video management, and intrusion detection for thousands of locations worldwide.

Hirsch Controllers

Hirsch Controllers have been installed globally for decades. Simple plug-in and flash-downloadable firmware upgrades can easily be installed in original panels, making them compliant with constantly evolving regulations and standards in a matter of minutes.

Hirsch panels have earned an unmatched reputation in the industry for being secure, reliable, and flexible. Hirsch access control panels carry UL ratings and were the first access control panels to offer National Institute of Standards & Technology (NIST) approved Advanced Encryption Standard (AES) 128-bit encryption. All Hirsch panels include full firmware functionality. All features are included in every panel and the user may elect to program and utilize any of these features without any additional firmware or cost from Hirsch.

uTrust TS Readers

The uTrust TS Reader family provides multi-technology, multi-use-case flexibility and support for all common low frequency credentials, PINs, and government-issued smart credentials, including PIV, PIV-I, CAC, TWIC, FRAC, as well as CIV. High frequency credentials, such as, MIFARE, DESFire, and PLAID are also supported.

Velocity Vision

Velocity Vision is a video management system (VMS) that can operate as a standalone VMS or integrate with Velocity access control software. Vision boasts centralized video management, event monitoring, alarm management, video wall, thick client, mobile app, web client, and much more. Velocity Vision offers packages that can provide basic VMS needs and scale to unlimited management servers, recording servers, and clients, that can fit any partner's requirements.

Vision AI

Vision AI is an artificial intelligence-enabled analytics platform that integrates effortlessly with existing Velocity Vision systems. Vision AI provides a comprehensive, single-pane-of-glass solution that offers complete situational awareness and revolutionizes how the user perceives, interprets, and acts on visual data.

Integrations

Hirsch hardware and Velocity software both boast multiple high level integrations. These integrations include:

- Wireless locks (Aperio or Schlage)
- Video integrations (Velocity Vision or third-party)
- Biometric readers (Veridt, Idemia, irisID, Suprema, BQT)
- IDS Integrations (DMP or Bosch)
- Active Directory/HR functions
- Visitor management
- And more!

Identiv Global Services (IGS)

The Identiv Global Services department is ready to help end users with a variety of requests. IGS can tackle anything from database migrations, to helping build new integrations through Velocity's powerful SDK. For more information, contact sales@identiv.com.
