

Velocity Web Services Client

3.8.2.893 Release Notes

Copyright© 2020, Identiv. Last updated on December 15, 2020.

New features and Improvements

Enrollment

Browser Based PIV Enrollment: The Velocity Web Services Console (VWSC) now supports browser based smart card enrollment.

- PIV, CAC, TWIC and PIV-I enrollment through the VWSC
- No need for a client based enrollment station
- Compatible USB Smart Card reader and VEL-VCCS license required

Edit Photos: VWSC now offers the ability to choose between more than one connected camera to add or update credential photos.

Enrollment Manager Search: The Operator can now specify how many records will be returned when running a search.

Find Credential Feature: Search for a specific credential by selecting: Credential ID, Card Stamp Number, Match Code or PIN Code. After selecting the credential type, enter the identifier and click find to view results. The results shown can be clicked-on and modified.

Search All Groups: Search within all Groups by selecting from the available fields in the Search All Groups tool. The results of the search appear in the Person's field on the left side of the enrollment manager screen.

Preview and Print Both Sides of a Badge: VWSC now allows Operators to specify if the credential is single sided or double sided for printing. Once selected, the Print Preview window will show either the single sided image or double sided image to review before printing.

Reader Control Groups: Reader Control Groups enable a credential to achieve different actions when placed at different readers on the same controllers but must be created in the Velocity thick-client, version 3.8.2 or later. In VWSC an Operator cannot create a Reader Control Group, but the Operator can add an existing Reader Control Group to a credential in Credential Properties. The Operator would open the Enrollment tab, search for the Person, and select the Credential then click on the Options tab to add the Reader Control Group.

- Reader Control Groups allow the same credential, at different readers, to do different things.
- Reader Control Groups allow 16 Control Zones (one for each reader in a panel) to be defined per credential that can be triggered or otherwise used by the credential in addition to the credentials assigned (access or control) function.

Photo Call-Up

Arrange Doors with Drag and Drop: After selecting the doors to view, the Operator has the ability to reposition the doors into the order that makes the most sense.

Option to Use Alternative Badge Template: gives you the ability to show different badge templates based on the credential, for instance, credentials could visually show distinctions between visitor badges and normal badges or by distinguishing employees by department.

Show "Access Granted" or "Access Denied": For at-a-glance recognition, credentials will be show the access grant or deny status in border color, an icon in the upper right hand corner of the card and in a hover over message. When the credentials is "Access Denied" they border color will change to red, a "stop" icon appears in the upper right hand corner and the term "Access Denied" appears when you hover over the card. If the credential is "Access Granted", the border turns green, a "check mark" icon appears in the upper right corner and the term "Access Granted" appears when you hover over the card. The visual icons and hover over status confirmations are designed to meet ADA requirements.

Web Client Sorting

Sorted Alphabetically: "Reporting" and "Door List" columns sort alphabetically by default.

Reports Available in Excel

Downloading in Excel Added: This version adds the ability for users to export reports in Excel, as well as PDF.

New Features

Reference ID	Summary
IDAK-552	Added ability to arrange Photo Call-up doors using drag and drop
